

EVACUBLAST™

DPF Cleaning System

Enviromotive has developed an unrivaled Diesel Particulate Filter Cleaning System. The EvacuBlast System has proven to out-perform competitive DPF Cleaning Machines in an average of thirty minutes! Enviromotive manufactures the most cost effective, and thorough DPF cleaning system on the market today.

The EB-9001 DPF Cleaning Cabinet is a manual system. Unlike automated systems, the EB-9001 allows a technician the versatility to concentrate on cells that may need extra attention. In turn, the customer receives a filter that will perform longer between cleaning cycles simply because the DPF is cleaned thoroughly. The EB-9001 includes adapter plates for all sizes, makes, and models of DPFs on the market today.

The EB-9002 Regeneration Oven is designed to protect the DPF during the regeneration cycle. With smart technology, the EB-9002 will monitor the DPF during the regeneration process making sure there is no uncontrolled regeneration to the filter. Enviromotive has designed the Regeneration Oven with fully programmable controls. The EB-9002 can hold multiple filters in a single cycle, and has 6 programmable options to ensure a proper regeneration process.

OVEN AVAILABLE IN 4 SIZES
